### LEVERAGE THE POWER OF ANSIBLE AUTOMATION

Every business is a digital business. Technology is your innovation engine, and delivering your applications faster helps you win. Historically, that required a lot of manual effort and complicated coordination. But today, there is Ansible—the simple, yet powerful IT automation engine that thousands of companies are using to drive complexity out of their environments and accelerate DevOps initiatives.

### AUTOMATION CREATES TIME

No one likes repetitive tasks. Because Ansible is simple, IT admins can begin automating away the drudgery from their daily tasks. Automation frees admins up to focus on efforts that help deliver more value to the business by speeding time to application delivery, and building on a culture of success. Ultimately, Ansible gives teams the one thing they can never get enough of: time. Allowing smart people to focus on smart things.

### AUTOMATION FOR EVERYONE

No matter where you are in the organization, or how technical—Ansible gives you a common language to describe your IT infrastructure. It's easy-to-learn, self-documenting, and doesn't require a grad-level computer science degree to read. Automation shouldn't be more complex than the tasks it's replacing.

### COMMUNITY-POWERED

Ansible is the most popular open source automation tool on GitHub today with more than a quarter million downloads per month. With over 2,000 contributors submitting new modules all the time, rest assured that what you are automating is covered in Ansible already, or will be very soon.

*"Ansible is amazing. It's already allowed us to save at least 10-15 hours per week managing our systems."*

- Provision new systems with ease
- Configure servers, networks, and devices
- Deploy and manage applications
- Orchestrate complex tasks and workflows
- Integrate with existing enterprise technology
- Unite disparate teams to enable DevOps

*"Ansible Tower has allowed us to provide better operations and security to our clients. It has also increased our efficiency as a team."*

## ABOUT ANSIBLE

Ansible, an open source community project sponsored by Red Hat, is the simplest way to automate IT. Ansible is the only automation language that can be used across entire IT teams – from systems and network administrators to developers and managers. Ansible by Red Hat provides enterprise-ready solutions to automate your entire application lifecycle – from servers to clouds to containers and everything in between. Ansible Tower by Red Hat is a commercial offering that helps teams manage complex multi-tier deployments by adding control, knowledge, and delegation to Ansible-powered environments.
