

Barracuda SSL VPN

Remote, Authenticated Access to Applications and Data

Your army of road warriors and remote workers require a quick, flexible, reliable and completely secure way to connect to your internal enterprise applications, information and network resources. They want to do this from anywhere in the world, at any time and from any suitable device. **The Barracuda SSL VPN provides the security and connectivity to deliver this access, via a web browser or virtually any mobile device.**

- Security
- Storage
- Application Delivery

The Barracuda Advantage

- No per-user fees
- Easy to use
- Easy to deploy
- Added security with built-in virus scanning
- Anytime, anywhere access

Product Spotlight

- Simple remote-worker access to corporate applications and data
- Fast and secure access from virtual any mobile device
- Remote access to MS Exchange, MS SharePoint and Windows File Shares
- Simple mobile device configuration, ideal for BYODs
- Powerful two-factor and 'progressive' authentication options

Easy as Opening a Web Browser

The Barracuda SSL VPN makes it easy for remote users to access internal applications and files. Unlike traditional VPN technologies, the Barracuda SSL VPN does not require any additional client software or complicated settings. Logging in from home or the road requires only a web browser and Internet connection. Upon login, users are presented with a portal of internal web applications or file shares.

More advanced applications like Remote Desktop Services or Citrix XenApp are available to users running Java.

Comprehensive Authentication

Administrators have complete control over user access with the option of further securing resources with secondary authentication. Possibilities include sending one-time passcodes to mobile phones, prompting with security questions, or integrating with advanced authentication systems like hardware tokens, RADIUS, and other additional security methods.

Comfort in a secure network

The Barracuda SSL VPN provides extra security layers, including the ability to reverse-proxy Exchange ActiveSync traffic to keep Windows servers safely inside the network perimeter. Integrated anti-virus protection secures file uploads to keep malware out of the network. Built on a hardened platform, the Barracuda SSL VPN is the ideal replacement for traditional software-based remote access gateways.

The Barracuda SSL VPN provides a very easy to set-up and manage system. It takes the work out of allowing remote access.

Technical Specs

Security Features

- Supports Active Directory, LDAP, NIS, and built-in user databases
- Policy-based rights management
- Multi-layered authentication schemes
- One-time password authentication via email or SMS
- Supports SecurID, VASCO, Safeword, and CryptoCard authentication tokens
- Supports Aladdin eToken, SafeNet iKey, and other PKI USB devices
- Client access controls based on operating system and web browser version
- Automatic cache cleaning and logout
- Web application URL masking
- Virtual keyboard

VPN Features

- Intranet web site forwarding
- Network file system browsing
- Web application single sign-on
- Remote desktop single sign-on
- Barracuda SSL VPN agent¹: Java agent for clientless deployment
- L2TP/IPsec and PPTP mobile device support
- Barracuda Network Connector: installable VPN client for IP connectivity
- Local Windows Explorer drive mapping
- Configurable SSL tunnels
- Multiple user logon realms

Virus Scanning

- Virus, spyware, and malware scanning
- Decompression of archives
- File type blocking

Auditing and Reporting Capabilities

- Track file, web, and network access
- Reports in PDF, CSV, and text formats
- Granular controls for access and policy
- Health monitoring
- Network utilization and appliance load statistics

Support Options

Barracuda Energize Updates

- Standard technical support
- Firmware and capability updates as required
- Automatic application definitions updates

Instant Replacement Service

- Replacement unit shipped next business day
- 24x7 technical support
- Hardware refresh every four years

Hardware Features

Connectors

- Standard VGA
- PS/2 keyboard/mouse
- Ethernet (see chart below)
- Serial port (DB-9)
