Who We Are

ZEBRA Consultants Ltd is a Business Information Technology company providing IT solutions and services in diverse technologies and markets. In order to make the most out of our solutions and services we partnered up with the industry's most valuable players: Microsoft, Red Hat, IBM, VMware, RSA, CheckPoint, Citrix, Cisco, Barracuda, Oracle, GFI, Acronis and Zimbra. These partnerships offer assurance to our customers about the solutions and services we offer and the high quality we constantly strive to provide.

- We are business information technology consultants providing business value-added consulting services in the area of IT;
- We serve clients across all major industries such as financial, government, education, telecommunication, utilities, shipping and commercial industries;
- We deliver the right technology to meet business objectives.

How We Differ

ZEBRA team is composed by skilled, certified and passionate professionals committed to drive our customers beyond their expectations. This is achieved by following a customer-driven approach working together with the organizations to solve their most crucial challenges.

Our People: skilled, passionate, committed

Our Approach: innovative, customer-driven, flexible

Our Results: quality, efficiency, effectiveness

What We Offer

Consulting Services

Consulting services is our way of providing outsourcing services to companies that need highly skilled people in their own backyard. There is no need to manage all business functions in-house. Our customers reduce overheads and get access to specialized skills with our consulting services.

Our range of consulting services is very broad and is mainly based on our partnerships with the leading IT vendors. Below we address some of the technologies we offer from each vendor:

- Microsoft Office 365
- Microsoft Azure
- Microsoft Windows Server
- Microsoft Active Directory
- Microsoft Exchange Server
- Microsoft SQL Server
- Microsoft SharePoint Server
- Microsoft Windows Intune

- Red Hat Enterprise Linux
- Red Hat Enterprise Virtualization
- Red Hat Enterprise OpenStack
- Red Hat Satellite Server
- Red Hat Enterprise High Availability
- Red Hat 3scale API Management Platform
- Red Hat Mobile Application Platform
- Red Hat OpenShift Container Platform
- Red Hat CloudForms

- JBoss Enterprise Application Platform
- JBoss Enterprise Web Server
- JBoss Fuse
- JBoss BPM Suite
- JBoss Data Virtualization

- IBM API Connect
- IBM Watson Studio
- IBM Watson Machine Learning
- IBM Robotic Process Automation (RPA)
- IBM Integration Bus
- IBM Cloud

- RSA SecurID
- RSA NetWitness Suite
- RSA Archer

Acronis

- Acronis Backup and Recovery Server for Windows
- Acronis Backup and Recovery Server for Linux
- Acronis Backup and Recovery Server Virtual Edition
- Acronis Backup and Recovery Workstation

- VMware vSphere
- VMware Server
- VMware ESXi
- VMware vCenter

- Citrix XenApp
- Citrix XenServer
- Citrix XenDesktop
- Citrix NetScaler
- Citrix Access Gateway

- Cisco Catalyst Switches
- Cisco ASA Firewalls
- Cisco Routers
- Cisco IPS
- Cisco Voice Over IP

- Barracuda Spam & Virus Firewall
- Barracuda Web Filter
- Barracuda Web Application Firewall
- Barracuda Message Archiver
- Barracuda Load Balancer
- Barracuda Email Security

- Zimbra Collaboration Suite
- Zimbra Desktop

- GFI LanGuard
- GFI FaxMaker
- GFI Archiver

- Oracle Database
- Oracle Real Application Clusters
- Oracle Application Server
- Oracle SOA
- Oracle RDBMS

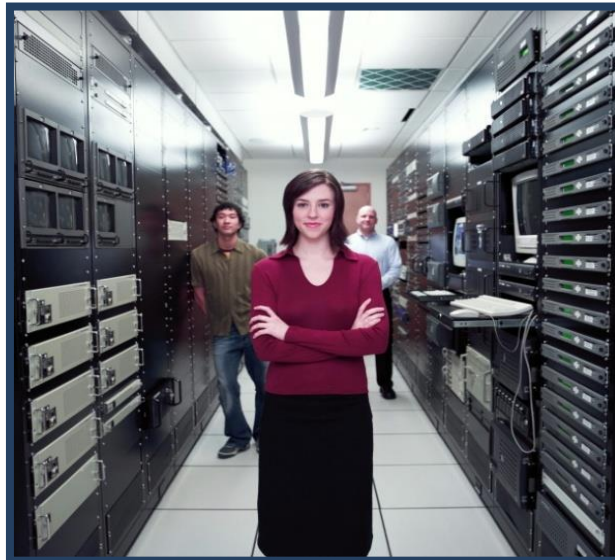

- SandBlast Agent
- CloudGuard SaaS
- CloudGuard Firewall

sky is NOT the limit.

Maintenance Support Services

We offer a variety of service plans that provide onsite, telephone and email support. These plans enable our customers to focus on their day to day business operations leaving any worries to us. Our maintenance services range from network administration, systems administration, database administration, and applications maintenance. Our deep expertise in old and new technologies allows us to support and maintain IT environments in an efficient and effective way.

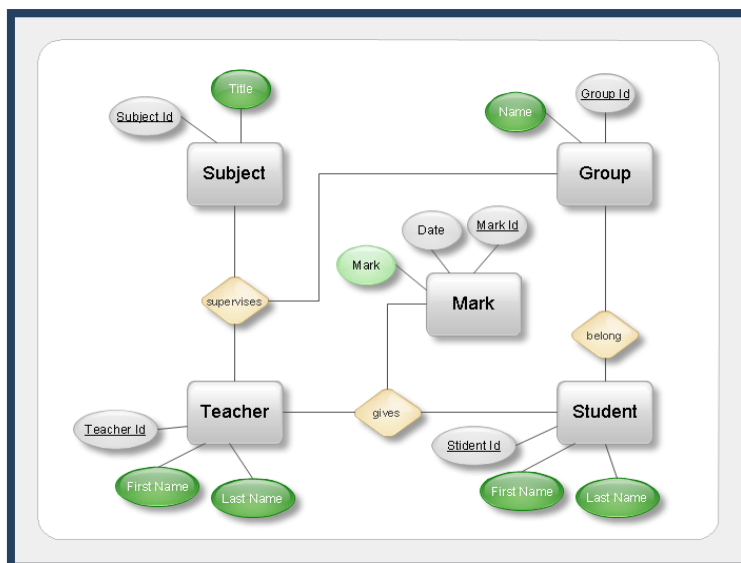

Maintenance services can be offered on an ad hoc basis or on proactive maintenance visits. Ad hoc based services are offered on customer request whereas proactive maintenance visits are offered on a monthly / bi-monthly / quarterly basis providing piece of mind as it can solve issues before they become problems. The support is provided by certified professionals and according to the agreement signed, response times can be guaranteed.

Custom Software Development

Using latest technology we develop custom applications for customers who are concerned about high standards. Our passionate team of programmers and analysts, analyze the requirements, develop, and deploy applications tailored to our customer needs. Using technologies such as MS C#, MS VB.NET, MS ASP.NET, HTML, Web 2.0, XML, Java, JavaScript, Ajax, Flash, Oracle Forms, Oracle Reports, and Oracle JDeveloper, customers rely on us to deliver applications of the highest standards. Most of all, we develop for the client and alongside with the client so the end product is built according to the requirements put on the table.

At ZEBRA we follow the de facto methodology SSADM (Structured Systems Analysis and Design Methodology) for the successful development of applications. We use many of the stages of SSADM throughout the systems development life cycle. SSADM is known as a systematic approach to the analysis and design of IT applications ensuring the effectiveness and quality of the applications to be delivered.

Website Development

Our trained and innovative developers are capable of building websites that look and feel the way our customers demand. Imagination and passion lead to creative designs and attractive websites. At ZEBRA we follow our own methodology derived from our knowledge and experience concerning website development and project management. With our customers' satisfaction being our number one priority, we develop websites following 7 key steps:

- Gather requirements through face to face meetings with the client;
- Document requirements and send them to the client for review and approval;
- Create a project plan so that the client knows what will be delivered and when;
- Create unique designs for the pages to be developed side by side with our customers;
- Provide Search Engine Optimization on web pages using the right meta tags and structure;
- Provide cross-browser testing so as the website is available to the maximum possible internet users;
- Provide Quality Assurance testing verifying (a) bug free delivery of website and (b) satisfaction of customer requirements.

Website Development services are also related to the following web-based applications which are developed entirely by ZEBRA team:

- **zeContent** - a user-friendly Content Management System which helps in maintaining websites at reduced costs. Our web-based solution allows non-technical users as well as IT professionals to modify and update content, features and functionality at anytime from anywhere.

... as simple as that!!!

- **zeCustomer** - our web based Customer Relationship Management package to help organizations develop profitable customer relationships by increasing sales and marketing performance and maximizing customer satisfaction and loyalty. It's about understanding, anticipating and responding to customers' needs. Send email and SMS campaigns as well as use customer's information to improve quality of service.

... customer satisfaction!!!

- **zeCommerce** - an eCommerce System which enables companies to sell products and services online. No more delays in issuing invoices, process payment transactions and issuing of receipts. zeCommerce is an online 24hrs store with fully automated mechanisms for managing stock, orders and transactions quickly and above all securely.

... the world in your cart!!!

- **zeTicket** - our web-based solution allows non-technical users, as well as IT professionals, to modify and update content, features of a website at anytime from anywhere. zeTicket allows users to generate and scan barcodes with real time validation. Further to the provided functionalities, zeTicket is fully customizable and can be tailored to users' specific needs.

... save time and money!!!

All above products can be integrated together providing a robust platform for managing content, customers and products / services on the Web, Intranet or Extranet.

Mobile Development

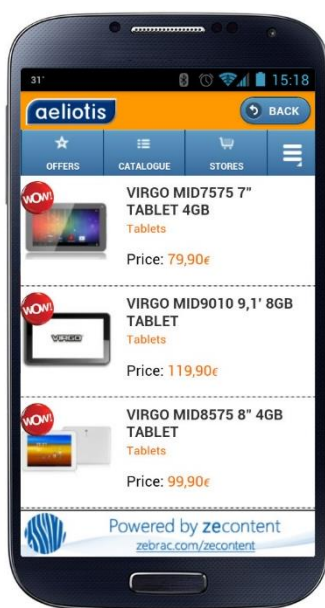

Mobile devices are becoming increasingly popular these days and we can help our clients towards establishing a presence in the mobile application market. In order to be ahead of competition, businesses need to be flexible and creative offering more options to the users. We develop mobile applications for all major platforms such as Apple iOS, Google Android and Microsoft Windows Mobile and for all mobile devices including smartphones and tablets.

Apart from mobile applications development, a mobile website is also an option for the businesses today. A mobile website refers to a simplified version of your existing website. When accessing traditional websites from a web browser on a desktop or laptop computer they behave fine on the big screen. If you then try to access them through a mobile or tablet device, you realize they are not as user friendly as they should be because of the smaller screen sizes.

Want to go mobile? Imagine it. Say it. Have it.

Transforming traditional websites to mobile websites is something that companies do to offer their users the optimum experience of navigation and presentation of information through their mobile devices which they use every day.

Systems Integration Services

A number of technologies exist today and many available solutions use those technologies. We can choose the right solutions for our customers and provide the necessary services in order to implement those solutions efficiently and effectively.

Whether our customers' needs are related to hardware, network, software or services, our skilled and experienced consultants will guide our clients through the right choice and help them build those systems which will add value to their business operations. Being partners with Microsoft, Red Hat, IBM, VMware, RSA, CheckPoint, Citrix, Cisco, Barracuda, Oracle, GFI, Acronis and Zimbra enables us to implement turnkey solutions ranging from the design and implementation of technical infrastructures to the development and implementation of complex business applications. Our turnkey solutions are also supported by our exceptional project management services ensuring the quality of the projects we deliver.

Project Management

A successful project is considered the one delivered on time, in the expected quality and within the specified budget. We at ZEBRA Consultants can ensure the success of the projects we deliver.

A project is a set of actions which have an organized and controlled start, middle and end focusing to deliver a unique product or service. Project Management is the discipline of organizing and managing those actions and resources involved in such a way that the project is delivered on time, within the scope, in the expected quality and within the specified budget.

Our experienced project management team can help our customers successfully deliver complex IT projects in diverse technologies and markets. Our proven experience in turnkey solutions implementations ensures the successful delivery of our projects. In order to achieve that, we follow PRINCE2 (PRoject IN Controlled Environments) methodology. PRINCE2 is an excellent project management framework which uses structured methods for managing a project.

Blockchain Technology Services

The world of finance, banking, forex, academia, health care and any other institution, organization or authority, dealing with the exchange of valuable data, credentials, certifications, transfer of money or asset face significant problems of fraud, lost and/or modified data. Usually, the various terms and conditions - that are constantly reviewed and changed over time - are signed by the involved parties in the form of agreements or contracts. Such paper-based contracts not only affect the trust between the associated parties they also result in expensive and time-consuming issuance, verification, recovery of lost or modified data, while many times this is impossible.

Blockchain is already impacting different industries and sectors in a large scale, from Health Care to Voting. Other businesses are already searching on how to adopt it. Decentralization is the key element to blockchain technology that differentiates itself from other platforms and business strategies. ZEBRA offers Blockchain technology services providing an all-in-one-solution for the above challenges. Smart contracts can be customized built, tested and be responsive to specific customers' needs in order to provide a strategic tool for businesses to execute their agreements or transactions.

ZEBRA Smart Contracts are built using the latest technology tools such as Hyperledger, GETH, Truffle, Solidity and XML which are running on the leading open source and most reliable operating system, the Red Hat Enterprise Linux. These Smart Contracts respond to specific client needs as it is fully customized and thus, the end product is built exactly according to the client's requirements. The customised Smart Contracts will collaborate with the client's chain of blocks and the client's DAPP in order to achieve their goal. Using open source technology tools helps to tie together the creative and technical aspects of the blockchain, including data storage, precision, safety and efficiency.

Transforming traditional contracts to smart contracts means:

- Identification of new business **opportunities**
- Satisfaction of new **requirements**
- Increased **competitiveness**
- Compliance with industry's **open standards**
- Expansion of **network** and **business**
- **Conflict-free** execution process
- Minimization of **costs** and saving of **time**
